- In login.test.ts :
```
cy.fixture('users.json').then(function (data) {
this.data = data;
})
```
it is better to put it in a before block to optimize memory usage.

- In login.test.ts :
```
loginPage.login("testautomation@cypresstest.com", "Test@1234")
```
input data must also be placed in user.json.

- In myAccount.test.ts loginPage is not used and import is not needed.

- Tests are missing checks should.

- The Page folder must be in the cypress folder and not in the tests folder.

- In loginPage.ts:
```
public validateLoginError(errorMessage: string) {
this.alertBox.should('be.visible')
this.alertMessage.should('have.text', errorMessage)
}
```
the check should be in the test.

- In myAccountPage.ts:
```
public validateSuccessfulLogout() {
loginPage.signinLink.should('be.visible')
}
```
the check should be in the test.

- In myAccountPage.ts:
```
public validateSuccessfulLogin() {
this.pageHeading.should('have.text', 'My account')
}
```
the check should be in the test.

- All tests must be placed in the root of the e2e folder with a .cy.js or .spec.js extension.
